Art Unit: 2781

1. Claims 1-2, 4, 7-12 are presented for examination. Claims 3, 5-6 have been canceled.
2. Applicant's arguments with respect to claims 1-2, 4, 7-12 have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 4, and 7-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Culbert patent NO. 5,708,816.
5. As per claim 1, and 7-10, Culbert teaches a power management method for a PDA which can be connected with an external communication terminal, comprising the steps : upon detecting power -on of said external communication terminal ... (see ref col. 3 line 63 to col. 4 line 21 of the specification), supplying electric power to an external communication terminal ... (see ref col. 4 line 1 to col. 5 line 65 of the specification). However, Culbert does not compare a battery voltage with the reference voltage and also does not generate a low voltage alarm when reference voltage is slightly higher than the battery voltage. "Official Notice" is taken that both the concept and advantages of comparing a battery voltage with the reference voltage and also generating a low

voltage alarm when a reference voltage is slightly higher than a battery voltage are well known and expected in the art. It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate these features into Culbert system because they would prevent excessive or overload power due to high- power devices while managing power consumption in the system.

6. As per claims 4 and 8, Culbert teaches a display and a speaker (see ref fig 1 elements 124 and 126).

7. As per claim 11, Culbert teaches a Rom (see ref fig 1 element 116).

***Allowable Subject Matter***

8. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frantz B. Jean whose telephone number is (703) 305-3970. The examiner can normally be reached on Monday thru Friday from 8:00 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz R. Sheikh, can be reached on (703) 305-9648. The fax phone number for this Group is (703) 305-3718.

Communications via Internet e-mail regarding this application, other than those under 35 U.S.C. 132 or which otherwise require a signature, may be used by the applicant and should be addressed to [Ayaz.Sheikh@uspto.gov].

All Internet e-mail communications will be made of record in the application file. PTO employees do not engage in Internet communications where there exists a possibility that sensitive information could be identified or exchanged unless the record includes a properly signed express waiver of the confidentiality requirements of 35 U.S.C. 122. This is more clearly set forth in the Interim Internet Usage Policy published in the Official Gazette of the Patent and Trademark on February 25, 1997 at 1195 OG 89.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305-3900.
